THM LAB COMPLETION REPORT

Web Application Basics & HTTP in Detail

Name: Muhammad Afnan K O

Focus: WAPT

Platform: TryHackMe.com

1. Objective — What was the task about?

The objective of these TryHackMe labs was to understand the basic concepts of web applications and HTTP communication through practical exercises. The labs focused on how web applications work, how a browser communicates with a server, and how HTTP requests and responses are handled. This labs include Finding flag hidden inside and inorder to get the flags I needed to complete some tasks they provide.

2. Concept/Understanding — What did you learn?

I learned the basic structure and working of web applications and the role of the client and server. I also learned how HTTP is used to communicate between them. The labs introduced concepts such as URLs, HTTP requests and responses, HTTP methods, headers, and status codes. These concepts helped me understand how information is exchanged when accessing a website.

3. Practical Work — What did you perform?

I completed the Web Application Basics and HTTP in Detail rooms on TryHackMe. During the exercises, I explored how web applications are accessed and how communication takes place between a browser and a web server. I also examined HTTP requests and responses and worked through the tasks provided in the labs to understand the concepts practically. I crafted GET, POST, DELETE http request and send them to get the flags.

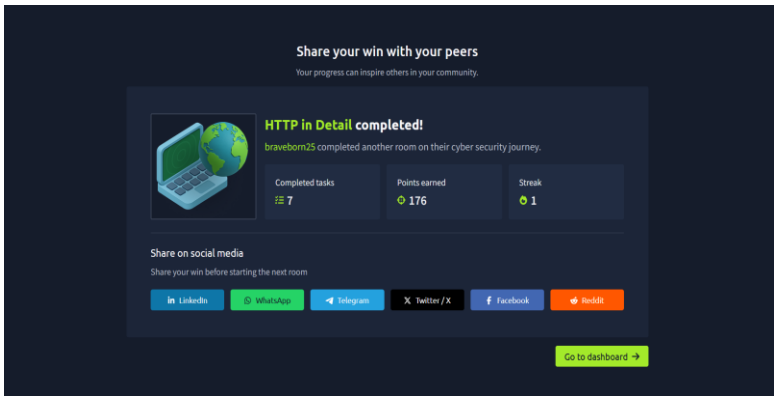

4. Tools Used — Tools used during the task.

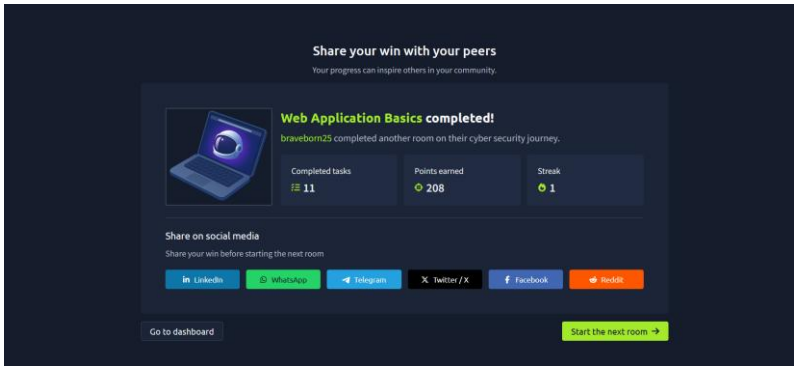

- Browser Developer Tools.
- Basic command-line tools.
- Browser inside labs.

5. Evidence — Relevant screenshots and results.

Screenshots of the completed TryHackMe rooms, practical exercises, and relevant results can be added below as evidence of the work completed.\

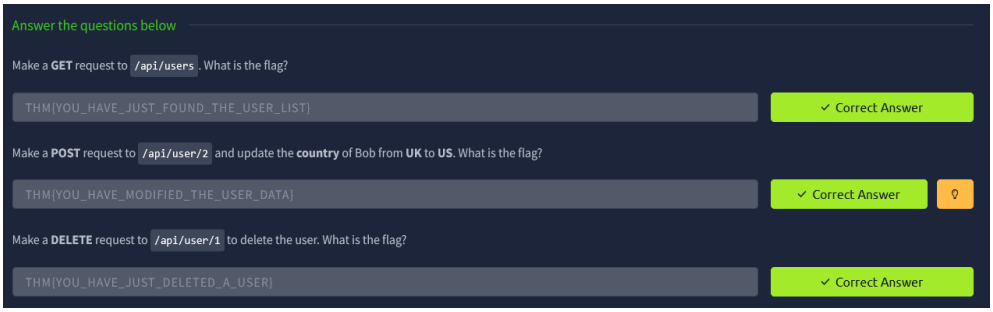

1.Screenshot of room completion:-

2.Screenshots of Flags Found:-

6. Result — What did you achieve or discover?

I successfully completed both the Web Application Basics and HTTP in Detail labs. I gained a clear basic understanding of how web applications work and how HTTP enables communication between clients and servers. I also became familiar with common HTTP methods, headers, and response status codes. This labs helped me to broaden my knowledge in the cybersecurity field and the penetration testing career.

7. Key Learnings — What did you learn from the task?

- Understood the basic structure and working of web applications.
- Learned how clients and servers communicate using HTTP.
- Gained an understanding of HTTP requests and responses.
- Learned about common HTTP methods, headers, and status codes.
- Gained practical experience by completing guided cybersecurity exercises.
- Developed a basic foundation for further learning in web application security.

Conclusion

The Web Application Basics and HTTP in Detail labs provided useful practical knowledge of web technologies and HTTP communication. Completing these labs helped me to understand more about the working of websites and web browsers, the use of developer tools made easy to understand the hidden things inside the webpages. Also I understood the format of URLs, and the status codes were helpful to understand how web servers responded.
